# Initial setup (20 Minutes)

- Setup repo
- Cloned repo
- Added files
- Created basic webpage with directions
- add index.php and composer.json
- Pushed to github
- Created Heroku app (checked to make sure it worked)

What's Next? (15 Minutes)

- Reviewed instructions
- Viewed video
- Started Pseudocode
  - Display characters available
  - Select Character
  - Select Defender
  - Take Turns

Getting Ready (5 minutes)

1. Setup Divs to show character images
2. Hide all the code that doesn't apply to what you are doing

```
index.html                    ×

 1   ...
20  <body>
21    <div class="container">
22      <h1>Racer Q</h1>
23    </div><!-- end container -->
24   ...
31  </body>
32  </html>
```

Progress:
20 minutes – Submitted with zero coding done

2 hours total: Some coding but using the same Heroku app:
